RAPID INFO

FROM

FRONTLINE INTEGRITY

www.frontlineintegrity.co.uk

Struggling to make sense of large volumes of pipeline integrity data?

Working with information spread across multiple systems, datasets and reports and want to bring data together in one place?

Finding it difficult to understand the relationship between anomalies, assessments, excavations and your wider integrity data?

Want to improve data visibility, streamline your workflows and make faster, more informed decisions?

If the answer is **yes** to any of the above, then **RAPID INFO** can support your business.

OVERVIEW

RAPID INFO is a cloud-based platform that utilises the Microsoft PowerBi platform at its core.

RAPID INFO interacts with all of **FRONTLINE INTEGRITY'S** Rapid Platform Modules and helps you to:

- **Visualise your integrity data**
  View ILI, CP, design, construction, assessment, anomaly, excavation and many more datasets across your pipeline network.
- **Interrogate your data**
  Explore large volumes of data to identify patterns, trends, relationships and key metrics.
- **Manage anomalies, excavations and other maintenance actions**
  Track anomalies, excavations, integrity, maintenance and operational activities from identification and planning through to execution and resolution.
- **Connect the bigger picture**
  Bring multiple datasets together to understand your pipeline and support better decision making.
- **Save time and improve efficiency**
  Spend less time searching and manipulating data, and more time making informed integrity decisions.

RAPID INFO - turning pipeline integrity data into actionable information.

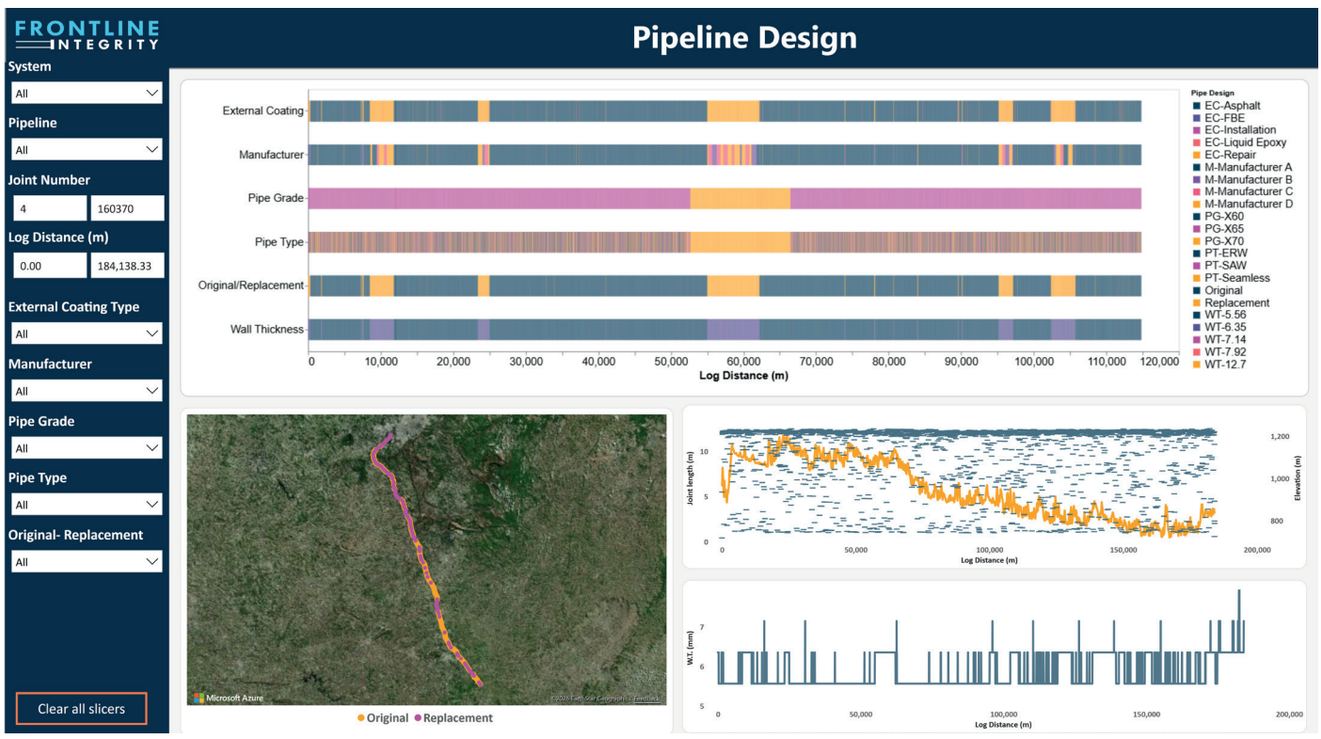

THE PLATFORM

RAPID INFO is a powerful cloud-based platform consisting of three key areas:

DATA VISUALISATION

DATA INTERROGATION

ANOMALY MANAGEMENT

DATA VISUALISATION AND INTEROGATION

RAPID INFO provides a single, integrated view of your pipeline integrity data:

- **Secure, centralised data**

  Data is securely stored within a central database, ready to access and use at the click of a button.

- **Fully aligned data**

  Data is standardised and aligned by the platform, enabling rapid upload, integration and use across your pipeline network.

- **Integrated RAPID platform**

  RAPID modules interact seamlessly, allowing assessment results and outputs from other modules to be visualised within RAPID INFO therefore maintaining consistency across the platform.

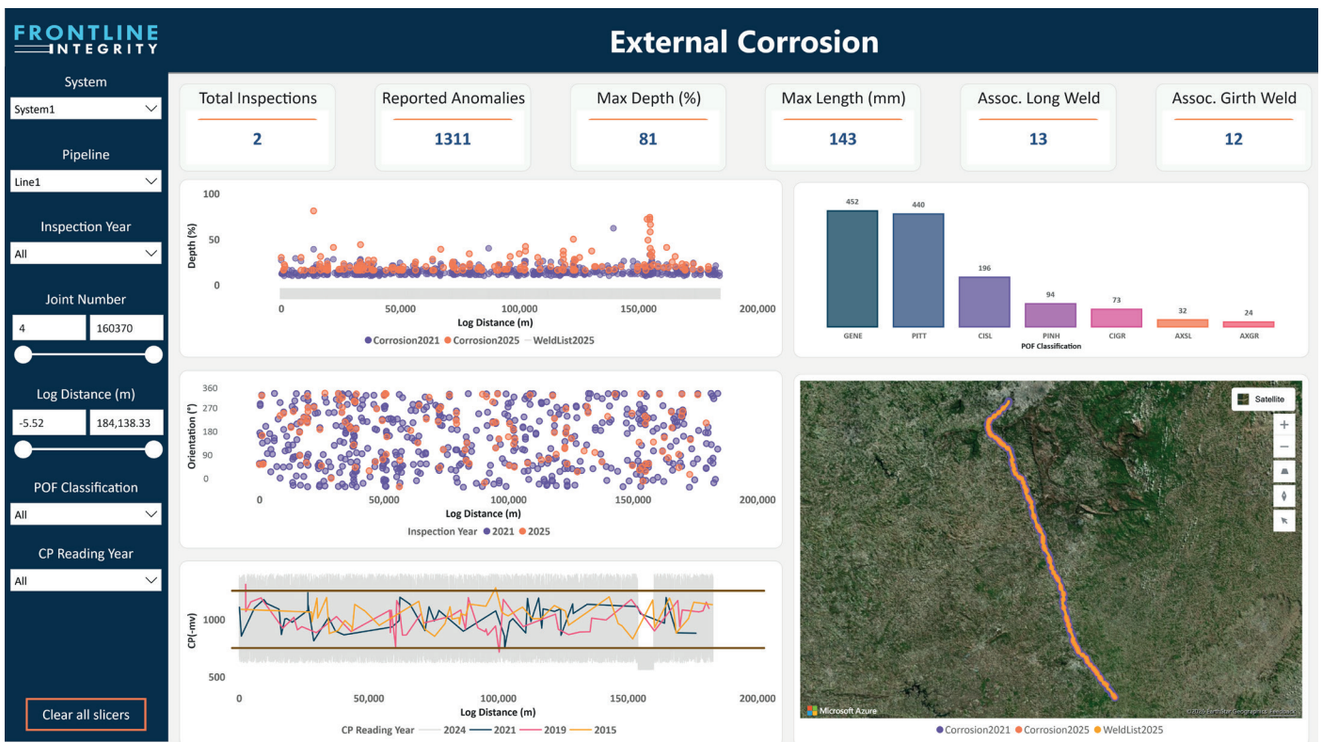

- **Connect data to support decisions**

  Bring all available integrity information together to allow users to understand the wider context behind anomalies, assessments and integrity threats.

- **Identify trends and relationships and visualise the bigger picture**

  Use integrated data visualisation to uncover patterns and relationships that may not be apparent when datasets are reviewed independently.

From network-wide to individual anomaly interrogation, RAPID INFO connects your pipeline integrity data to provide the complete picture.

ANOMALY MANAGEMENT

Plan. Prioritise. Execute. Track.

Manage your entire integrity programme from a single, connected view.

- **Manage anomalies from assessment to repair**

  Bring assessment results from other RAPID modules or external assessments into one platform and manage the actions required for each identified anomaly.

- **Plan your excavation programme**

  Determine which anomalies require excavation, when they should be excavated and which repair options may be required, allowing maintenance activities to be planned effectively with the possibility to group close-by excavation locations.

- **Capture all integrity-related excavations**

  Add excavation locations that are not anomaly-led, ensuring planned maintenance and integrity activities are managed alongside anomaly-driven work.

- **Build a holistic integrity management plan**

  Combine anomalies, assessments, excavations, repairs and other integrity actions to visualise the complete plan for each pipeline section.

- **Track progress and performance**

  Monitor the status of integrity actions from planning through to completion and use KPIs to track programme performance and monitor outstanding work.

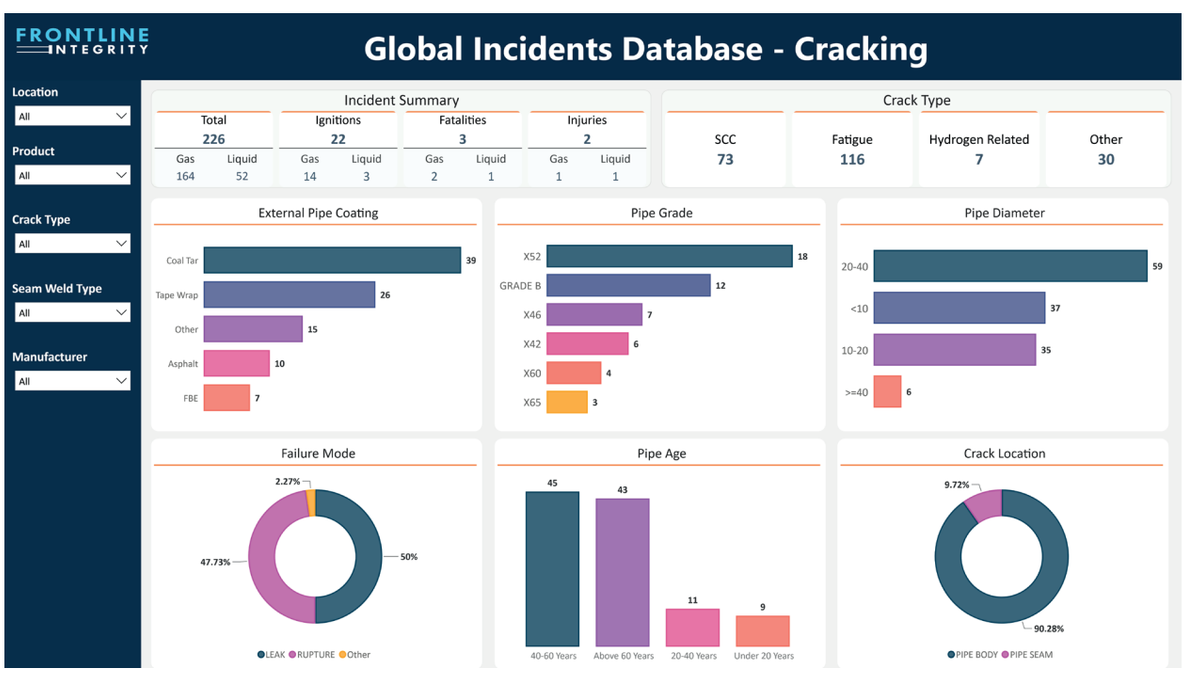

ADDITIONAL DASHBOARDS

In addition to our data visualisation, operators also get access to the following:

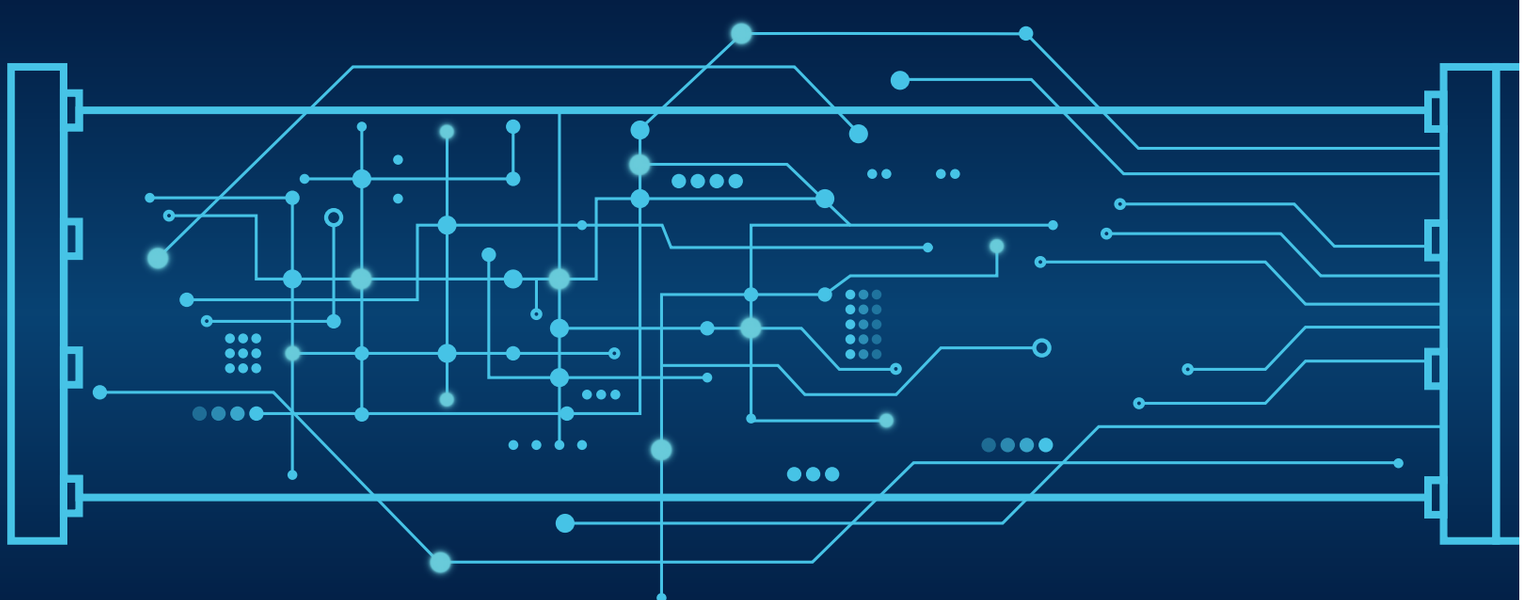

- **ILI Vendor Database**
  This showcases ILI options across the industry vendors, per threat.
- **Crack Incident Database**
  A compilation of crack incident statistics across the globe.
